$\mu g/m^3$ = micrograms per cubic meter

BTEX = Benzene, Toluene, Ethylbenzene, and Xylenes
VOC = Volatile Organic Compound

CAS No. = Chemical Abstracts Service Number
MGP = Manufactured Gas Plant

Bolding indicates a detected result concentration

**Data Qualifiers:**

* = The duplicate result was not within control limits.
B = The analyte was detected in the associated method blank.
C = The analyte may be biased high.
CI = The peak identified by the data system exhibited chromatographic interference that could not be resolved. There is reason to suspect there may be a high bias.
J = The result is an estimated value.
U = The result was not detected above the reporting limit.
UJ = The results was not detected at or above the reporting limit shown and the reporting limit is estimated.

mg/kg - milligrams/kilogram or parts per million (ppm)
PAHs - polycyclic aromatic hydrocarbons
SVOCs - semivolatile organic compounds
NYSDEC - New York State Department of Environmental Conservation
Total PAHs are calculated using detects only.
Total PAH16 is calculated using the EPA16 list of analytes: Acenaphthene, Acenaphthylene, Anthracene, Benz[a]anthracene, Benzo[a]pyrene, Benzo[b]fluoranthene, Benzo[g,h,i]perylene, Benzo[k]fluoranthene, Chrysene, Dibenz[a,h]anthracene, Fluoranthene, Fluorene, Indeno[1,2,3-cd]pyrene, Naphthalene, Phenanthrene, and Pyrene
Total PAH17 is calculated using the EPA16 list of analytes plus 2-Methylnaphthalene

Bolding indicates a detected concentration

**Laboratory Qualifiers:**
B - Analyte detected in the associated method blank
D - Results for dilution
E - Value above quantitation range
J - Estimated value
P - The relative percent difference between the primary and confirmation column/detector is >40%. The lower value has been reported.
U - Indicates not detected at or above the reporting limit shown
